

FUND PROFILE

Fund Classification	Balanced Fund
Risk Profile	Moderate to Aggressive
Fund Currency	Philippine Peso
Launch Date	03-Jul-19
Net Asset Value per Share (NAVPS)	0.208
Fund Size	PHP 290.01 in Millions
Annualized Volatility	12.17%
Management Fee	up to 1.8750% per annum
Min. Initial Investment	PHP 5,000
Min. Add'l Investment	PHP 1,000
Min. Holding Period	6 months
Sales Load	max. of 2%
Exit Fee	1.00% within 6 months
Redemption Notice Period	max. of 7 days
Valuation Method	Marked-to-Market
Custodian Bank	Deutsche Bank AG Manila
Transfer Agent	Metrobank Trust

MARKET UPDATE

- The PSEI broke its 4-month win streak in March with a -0.6% drop MoM as foreigners turned net sellers amid FTSE quarterly rebalancing. Nonetheless, with a YTD gain of 7.03%, the PSEI remains as one of the outperformers in the region.
- On the local front, inflation picked up for the first time in 5 months to 3.4% YoY in February, accelerating from 2.8% in January and above consensus of 3% boosted by higher food and oil prices. BSP Governor Remolona ruled out the possibility of a rate cut within the first half of the year, saying such a policy move is "too soon" with El Nino and wage hike risks still present. Similarly in the U.S., investors continued to reassess rate cut expectations, following Fed Chair Powell's statement that the Fed was in no rush to cut rates.
- All sectors ended in the red except Services (5.30%) lifted by the gains in CNVRG (10.67%) and ICT (10.03%). On the other hand, M&O plunged the most by -4.55% followed by Industrials (-2.59%). With sticky inflation and "high-for-longer" monetary policy outlook, we expected the local bourse to remain challenged in the first half of 2024.
- Sectors: Services +5.30%, Financials (-0.69%), Property (-1.16%), Holdings (-1.38%), Industrials (-2.59%), M&O (-4.55%)
- Top 5 Index Performers: CNPF +19.40%, CNVRG +10.67%, ICT +10.03%, MONDE +9.20%, SCC +8.05%
- Bottom Laggards: WLCON (-17.69%), NIKL (-11.89%), AEV (-11.60%), JGS (-11.22%), URC (-10.00%)
- Local yields traded flat to slightly lower by 1 – 7 bps as the stronger notion of a June Fed rate cut fueled buying interest in the market, mainly in the belly to the long end of the curve. As expected, the BSP kept their policy rates unchanged in the April MB meeting, while adjusting their risk-adjusted inflation forecasts for 2024 to 4.0% from 3.9% but kept the forecast for 2025 at 3.5%. Risks to inflation continue to remain tilted to the upside, as seen in latest inflation print for March at 3.7%, lower than 3.8% consensus, but higher than 3.4% previous figure. The BTR also released their schedule of borrowings for the 2nd quarter: PHP 195 Bn in T-Bills, and PHP 390 Bn in T-bonds with tenors mainly focused on the belly to the long end (7-year, 10-year, 15-year, 20-year).
- We expect the local GS market to trade rangebound with upward bias given higher US yields, lack of local downward catalysts, additional bond supply from the auctions, and lower expectations of policy rate cuts. Market movement will continue to be dictated by key economic data releases and further signals from the BSP on their monetary policy moving forward.
- US Treasury yields traded slightly lower by around 3 – 8 bps as the latest Fed dot plot reaffirmed the notion of three Fed rate cuts for the year, with the earliest priced in at the June FOMC meeting. As expected, the Fed kept their policy rates unchanged in the March FOMC meeting as inflation, though easing over the past year, remains elevated and the labor market remains tight. Policymakers continue to estimate three policy rate cuts for the year (same in December dot plot), three cuts in 2025 (one fewer than in December), and three more cuts in 2026. ROP prices traded higher by 0.1 – 1.0 pts as ROP yields tracked the movement in US Treasuries, where the US 10-year closed at 4.206% from 4.252% last month.
- We expect the market to trade rangebound in the near term with upward bias given higher US yields as the market is pricing in fewer Fed rate cuts for the year given the recent higher-than-expected data releases (March US CPI 3.5% vs 3.4% consensus, 3.2% previous). Market movement will continue to be dictated by upcoming data releases and signals from the Fed on their monetary policy moving forward.
